Shikshak: update the Bolna voice agents

For the person who hosts Shikshak (Render + Bolna). About 10 minutes. Live site: https://shikshak-o0l8.onrender.com

> **How to use this:** open Claude Code on your computer, in your `Shikshak` folder (the one whose `.env` has the Bolna key and `TOOLS_TOKEN`), and paste everything in the **Prompt** section below. You must paste it yourself: the repo's rules say Claude only runs `bolna:setup` when the person it works for asks.

What this does

- Updates the three live voice agents (normal, slower, faster) with the latest instructions: slider graphs on the board, and the tutor introducing herself as "I am Shikshak, your tutor".
- Switches on Tamil and Telugu voice classes.
- Places no calls and costs nothing; the website code is not changed.

Prompt (paste into Claude Code)

I'm asking you to update our live Bolna voice agents for Shikshak by running `npm run bolna:setup`, and to make Tamil and Telugu voice classes work. Follow these steps exactly and stop if any check fails.

1. Get the latest code

```
git checkout main
git pull origin main
npm ci
```

The latest `main` has new agent instructions in `bolna/agent-prompt.md` (slider graphs, "I am Shikshak, your tutor").

2. Check `.env` (names only; never print values; compare ids only)

- Present and non-empty: `BOLNA_API_KEY`, `TOOLS_TOKEN`, `PUBLIC_URL`, `BOLNA_AGENT_ID`, `BOLNA_AGENT_ID_SLOW`, `BOLNA_AGENT_ID_FAST`.
- `PUBLIC_URL` must be `https://shikshak-o0l8.onrender.com`.
- The agent ids must be exactly:

  ```
  BOLNA_AGENT_ID=7438fadd-ad12-411c-9e31-fb9ad976ecbd
  BOLNA_AGENT_ID_SLOW=640fa0f4-510e-4f56-91aa-e5bc2da409d4
  BOLNA_AGENT_ID_FAST=6ab6f015-fc04-491e-beba-df2d6da1206a
  ```

  If they're missing or different, stop and tell me: without them the script would create new agents instead of updating the live ones.
- Set `BOLNA_AGENT_LANGUAGES=hi,en,ta,te` in `.env`.

3. Check `TOOLS_TOKEN` matches the live server (changes nothing)

Send this with the real token, then again with the token replaced by `wrong-token`, and compare the status codes:

```
curl -s -o /dev/null -w "%{http_code}" -X POST "$PUBLIC_URL/tools/look_at_board" -H "Autho
rization: Bearer $TOOLS_TOKEN" -H "Content-Type: application/json" -d '{"session_code":"s_
doesnotexist000"}'
```

If both get 401 or 403, the token doesn't match Render's: stop and tell me. A different status for the real token means it was accepted.

4. Dry run

- `npm run bolna:setup -- --dry > /dev/null` must succeed.
- `npm run bolna:setup -- --dry` must show the agent configured with Hindi, English, Tamil and Telugu (`hi`, `en`, `ta`, `te` in its language settings). Show me only that part, never keys or tokens.

5. Run it once

```
npm run bolna:setup
```

- It must print "Updated normal agent ...", "Updated slower agent ..." and "Updated faster agent ...". If any line says **"Created"**, stop and tell me.
- If Bolna returns an error, report it without secrets and retry at most once. If Bolna rejects Tamil or Telugu (a language, voice or transcriber error), stop and tell me the error.

6. Verify

`GET https://api.bolna.ai/v2/agent/<BOLNA_AGENT_ID>` with `Authorization: Bearer $BOLNA_API_KEY`. Check that:

- the prompt mentions `params:` (slider graphs) and "I am Shikshak, your tutor";
- the agent's language settings include `ta` and `te`.

7. Switch Tamil and Telugu on in the live site

Only if step 5 printed three "Updated" lines:

- In the Render dashboard (**shikshak** service → **Environment**), change `BOLNA_AGENT_LANGUAGES` from `hi,en` to `hi,en,ta,te` and save.
- If you can't change Render settings, tell me and I'll do it by hand. Saving restarts the site, which wipes learner data on the free plan.

Rules

- Never print or commit `.env` or any key.
- Don't commit or push anything.
- Don't place any calls.

Report back

Which checks passed, the three "Updated" lines, the verification results, and whether the Render setting was changed.

Afterwards: two short test classes

1. **Hinglish:** the tutor writes on the board while she talks, and draws a graph with sliders when asked how a parabola changes.
2. **Tamil or Telugu:** make a profile with that language and start a class. It should connect and she should speak that language.

If she talks but the board stays empty, `TOOLS_TOKEN` doesn't match Render's. Tamil and Telugu haven't been tested in a live call yet: have a speaker of the language listen before showing them to anyone.
